Notes:

1) RPD is Relative Percent Difference (Difference / Mean expressed as a percent). Used as the default precision evaluation.

2) Sample Period May 30-June 11; Station#11: No analytical value was reported for the Station #11 routine sample nor the blank sample at Station #11, due to laboratory error.

The samples were compromised during an instrument error, with no option to rerun. The duplicate and routine values have been interchanged for reporting purposes.

The laboratory has also indicated the reported values at Station #10, Station#11 and Station#12 may be biased low.

3) Sample Period July 11-25: Station #8 was impacted by a >50% off-site wind profile for this period.

4) Sample Period Sept. 5 - 19: ALS was unable to report results for Stations 2 and 3 due to a power failure at the laboratory while analyzing the samples.

5) Sample Period Nov. 14-28: Sample tube at STN-7 was missing from shroud at end of sampling period (November 28).

Memo

To: Whom it may concern

From: Environmental Department

Date: 11-Feb-2019

Re: Petroleum Refinery Technical Standard S.65(2) 6. iii. Annual Summary of Notification – ambient monitoring

Subparagraph 6. iii. of subsection 65(2) of the Tech Standard requires the preparation of an annual summary of the information required by section 63.

Section 63 of the Petroleum Refinery Technical Standard [the “Tech Standard”] requires the following:

63. (1) A registered person shall ensure that, as soon as practicable, a provincial officer is notified in writing if it is determined under section 62 that there has been a statistically significant increase in the concentration of benzene at an ambient monitor required by subsection 60 (1).

(2) No later than six months after notice is required to be given under subsection (1), the registered person shall ensure that the following information is submitted, in writing, to a provincial officer:

1. The measured and calculated values relating to the statistically significant increase in the concentration of benzene.
2. An explanation of the suspected cause of the statistically significant increase in the concentration of benzene.
3. A description of any steps taken or that will be taken to prevent, minimize, or reduce the risk of future statistically significant increases in the concentration of benzene, if any.

4. An indication of the date by which each step mentioned in paragraph 3 will be implemented.
5. A written explanation of how each step mentioned in paragraph 3 will prevent, minimize or reduce the risk of any future statistically significant increases in the concentration of benzene.

Subsection 63(3) of the Tech Standard requires that a statistical analysis shall be completed following the fourth full calendar year for which a determination of whether a statistically significant increase in the concentration of benzene has occurred. Until this statistical analysis is completed following the collection of four (4) full years of data a determination of whether a statistically significant increase has occurred will be unable to be established.
