Breakdowns, failures and unplanned downtime can have serious impacts on your business; aside from the costs associated with reactive maintenance tasks and repairs, production losses can be extremely expensive. These problems may be avoided if you are armed with the right information. The Shell LubeAnalyst service provides a health check for your lubricants and machinery. It is an oil condition monitoring service that aims to keep your business running smoothly by helping to identify potential oil or equipment failures before they become critical.

**Our Services Portfolio has delivered over $146 million in documented savings** to our customers worldwide.

**Designed to Improve Your Operations: Key Benefits**

Shell LubeAnalyst can help you to reduce downtime and lost production, enhance equipment reliability and reduce maintenance costs. This is because it helps you to:

- **identify potential problems** at an early stage. This early-warning system means that remedial action can be scheduled before the issue becomes critical.
- **optimise maintenance and oil-drain intervals**. Our interpretation of the laboratory results will indicate the condition of the equipment and the lubricant, so that maintenance or an oil drain can be scheduled accordingly.
- **monitor the performance of your equipment** over time. Identify possible root causes of poor performance and implement corrective actions to maintain peak performance and productivity.

**What Makes Us Different?**

Shell Lubricants has expertise in lubricant design coupled with more than 50 years of in-field experience. Shell will apply its knowledge of how lubricants perform in the real world to benefit your business.

- a global, extensive historic database with over 25 million data points that provide unparalleled insights, trends and benchmarking
- highly qualified lubricant experts and state-of-the-art laboratory equipment
- more than 300 technical experts supporting customers locally
- a truly global reach.

**How It Works**

Having registered for the service online, you take oil samples from your equipment and send the samples to an accredited Shell laboratory (see Figure 1). As soon as we have tested and analysed your samples, we will email you our diagnosis and recommendations. In this way, Shell LubeAnalyst provides an early-warning system to help bring your equipment and lubricants to optimum working order.

Reports are available online 24 hours a day, seven days a week. Your plant’s historical records are all stored online in a secure, password-protected area. Shell LubeAnalyst also offers tailor-made reports that provide trending and benchmarking insights to help you take the right lubrication and maintenance actions for your operations.

**The Shell LubeAnalyst Service Provides a Health Check for Your Lubricants and Machinery. It Is an Oil Condition Monitoring Service That Aims to Keep Your Business Running Smoothly, Increase Your Productivity and Lower Your Costs.**

*Savings documented and validated by our customers. The savings indicated are specific to the calculation date and mentioned site. These calculations may vary from site to site, depending on the application, the operating conditions, the current products being used, the condition of the equipment and the maintenance practices.*
With oil condition monitoring, expert interpretation of oil and equipment monitoring results is key – and this is built into the Shell LubeAnalyst service.

**THE SHELL LUBEANALYST REPORT**

With oil condition monitoring, expert interpretation of oil and equipment monitoring results is key – and this is built into the Shell LubeAnalyst service.
